Recommendation

Yes

Comments: This is a fantastic resource with some essential components for building true science learners and thinkers. While some standards were not hit as much as I would like to see (i.e. theory v law), the writing, argumentation and experimentation aspects of this source are great and would engage students while teaching them important science concepts.

When looking at standards alignment reviewers should consider not only the robustness of the standard coverage but also the content complexity (depth of knowledge level) if appropriate. More information on content complexity as it relates to Florida standards can be found at: http://www.cpalms.org/Uploads/docs/CPALMS/initiatives/contentcomplexity/CPALMS_ccdefinitions_140711.pdf

For example, if the standard is marked as a level 3 (strategic reasoning and complex thinking) then the materials coverage should reflect this. If the materials coverage is only sufficient to allow for recall (level 1) then this should be reflected in the points assigned.
