Comments: The STEMScopes Florida is a very interesting resource. The online materials and teach support are amazing. Using this set of materials move you completely away from the pen and paper and textbook method that is now viewed as "Old School." The ability to provide students with on their level learning is great. For the schools that do not have computers and reliable internet support, I worry that the teacher would not have enough materials for every day in the classroom. However, for the schools with easy access to computer and reliable internet this could be a complete game changer in the classroom!

When looking at standards alignment reviewers should consider not only the robustness of the standard coverage but also the content complexity (depth of knowledge level) if appropriate. More information on content complexity as it relates to Florida standards can be found at: http://www.cpalms.org/Uploads/docs/CPALMS/initiatives/contentcomplexity/CPALMS codefinitions 140711.pdf

For example, if the standard is marked as a level 3 (strategic reasoning and complex thinking) then the materials coverage should reflect this. If the materials coverage is only sufficient to allow for recall (level 1) then this should be reflected in the points assigned.

Scientific knowledge can change because it is often examined and re-examined by new investigations and scientific argumentation. Because of these frequent examinations, scientific knowledge becomes stronger, leading to its durability.
Remarks/Examples:
Recognize that ideas with the most durable explanatory power become established theories, but scientific explanations are continually subjected to change in the face of new evidence.
