# Technical Q\&A for Mega-States Report 

## 2nd Draft 02/08/13

## Contents

## A. Reporting purpose and demographic information

1. Why focus on the Mega-States?
2. What were some of the school and student characteristics for the Mega-States?
3. How did the demographic makeup of the student population shift over time in the MegaStates?
4. What is the distribution of students by Hispanic origin and by English language learners and students from lower-income families?
5. Are the Mega-States educating the preponderance of lower-income or minority students in the nation?

## B. Exclusions and accommodations

6. What were the exclusion and accommodation rates for the Mega-States in the NAEP reading, mathematics, and science assessments?
7. What accommodations were offered in the NAEP reading, mathematics, and science assessments?
8. Why is the exclusion rate higher in Texas in grade 4 reading than in the other Mega-States?

## C. Reporting and interpreting results

9. What results were included in the Mega-States report? Why weren't writing results included in the report?
10. Can results be compared across subjects and grades?
11. What information is on the website that is not shown in the report card?
12. What were the score changes for the other 45 states in the NAEP reading and mathematics assessments?

## A. Reporting purpose and demographic information

## 1. Why focus on the Mega-States?

The importance of these "Mega-States" goes beyond the sheer size of their population. They now serve more than half of the nation's English language learners (ELL), as well as some of the largest concentrations of children from lower-income families. As policymakers and educators look at the nation's changing demographics and explore ways to close achievement gaps, the educational progress of children in these states is of interest far beyond their state borders. That's why the National Center for Education Statistics and the National Assessment Governing Board focused this special report on educational outcomes in the five largest states.

## 2. What were some of the school and student characteristics for the Mega-States?

The table below provides an overview of the five Mega-States in several key categories, including the number of students enrolled in operating schools in the nation and the five Mega-States. The expenditures per pupil, student/teacher ratio, percentage of students eligible for free/reduced-price school lunch, and number of English language learners are also shown.

School and student characteristics for public elementary and secondary schools, by state/jurisdiction:
Fiscal year 2009, school year 2009-10, and school year 2010-11

| State/jurisdiction | School System Data |  |  |  | Socioeconomic <br> Indicators <br> Percentage of <br> students eligible <br> for free or <br> reduced-price <br> school lunch | Number of English language learners |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number of operating schools | Number of students | Current expenditures per pupil | Student/ teacher ratio |  |  |
| United States | 98,817 | 49,484,181 | \$10,591 | 16.0 | 48.0 | 5,208,247 |
| California | 10,124 | 6,289,578 | 9,503 | 24.1 | 53.8 | 1,467,989 |
| Florida | 4,131 | 2,643,347 | 8,867 | 15.1 | 56.0 | 260,202 |
| Illinois | 4,361 | 2,091,654 | 11,592 | 15.7 | 46.6 | 176,262 |
| New York | 4,757 | 2,734,955 | 17,746 | 12.9 | 47.8 | 237,634 |
| Texas | 8,732 | 4,935,715 | 8,562 | 14.7 | 50.0 | 726,823 |

NOTE: The results for current expenditures per pupil are based on fiscal year 2009, and the results for the number of English language learners are based on school year 2009-10. The other results shown in the table are based on school year 2010-11.
SOURCE: U.S. Department of Education, National Center for Education Statistics, Common Core of Data (CCD), "Public Elementary/Secondary School Universe Survey," 2010-11, Version 1a; and "State Nonfiscal Survey of Public Elementary/Secondary Education," 2010-11, Version 1a; and "National Public Education Financial Survey," FY09 (2008-09); and Consolidated State Performance Reports, 2009-10.

## 3. How did the demographic makeup of the student population shift over time in the Mega-States?

The table below shows that the demographic makeup of students has changed in the MegaStates and in the nation overall. In looking at eighth-graders who were assessed in NAEP mathematics, the percentage of Hispanic students assessed in 2011 increased nationally and across the Mega-States compared to 1990, while the percentage of White students assessed decreased. In comparison to 2003, the proportion of students eligible for free/reduced-price school lunch increased in the nation and the Mega-States.

Percentage of eighth-grade public school students assessed in NAEP mathematics, by jurisdiction, race/ethnicity, and eligibility for free/reducedprice school lunch: 1990, 2003, and 2011

| Race/ethnicity | Nation (public) |  | California |  |  | Florida |  |  | Illinois |  |  | New York |  |  | Texas |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1990 | 2011 | 19902011 |  |  | 19902011 |  |  | 19902011 |  |  | 19902011 |  |  | 19902011 |  |  |
| White | 73 | * 54 | 49 | * | 26 | 64 | * | 45 | 70 |  | 51 | 61 |  | 51 | 50 |  | 32 |
| Black | 16 | 16 | 7 |  | 7 | 22 |  | 22 | 19 |  | 18 | 19 |  | 19 | 14 |  | 13 |
| Hispanic | 7 | 23 | 30 |  | 52 | 12 |  |  | 8 |  | 24 | 13 |  | 22 | 33 |  | 51 |
| Asian/Pacific Islander | 2 | 6 | 12 |  | 15 | 2 |  | 3 | 2 |  | 5 | 4 |  | 8 | 2 |  | 4 |
| American Indian/Alaska Native | 1 | 1 | 1 |  | 1 | \# |  | \# | \# |  | \# | 1 |  | \# | \# |  | \# |
| Free/reduced-price school lunch | Nation (public) |  | California |  |  | Florida |  |  | Illinois |  |  | New York |  |  | Texas |  |  |
|  | 2003 | 2011 | 2003 |  | 2011 | 2003 |  | 2011 | 2003 |  | 2011 | 2003 |  | 2011 | 2003 |  | 2011 |
| Eligible | 36 | 48 | 41 | * | 54 | 43 |  | 55 | 37 |  | 48 | 44 |  | 51 | 45 |  | 59 |
| Not eligible | 58 | 52 | 46 |  | 45 | 52 | * | 45 | 60 |  | 52 | 51 |  | 49 | 53 | * | 41 |

\# Rounds to zero.

* Significantly different ( $p<.05$ ) from 2011.

NOTE: Detail may not sum to totals because results are not shown for students whose race/ethnicity was two or more races and for students whose eligibility status for free/reduced-price school lunch was not available.

## 4. What is the distribution of students by Hispanic origin and by English language learners and students from lower-income families?

The three charts below show the distribution by Hispanic origin in each state for all public school students at grade 8. In addition, Hispanic origin is cross-tabulated by English language learners (ELL), and by students who are eligible for the National School Lunch Program (NSLP). For example, 6 percent of all public school eighth-graders in Florida are Cuban, compared to 0.4 percent in the nation and 0.1 percent in the other Mega-States. Among ELL students in Florida, 18 percent are Mexican, 13 percent are Puerto Rican, 19 percent are Cuban, 23 percents are from some other Hispanic or Latino background, and 1 percent reported two or more of these Hispanic origins.

Grade 8 Math 2011

| Jurisdiction | All students |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Not Hispanic | Hispanic Origin |  |  |  |  |  |
|  |  | Mexican | Puerto Rican | Cuban | Other | Two or more | Not specified |
| National Public | 77.5\% | 13.2\% | 1.5\% | 0.4\% | 4.9\% | 1.6\% | 0.9\% |

## 5. Are the Mega-States educating the preponderance of lower-income or minority students in the nation?

Based on the 2011 NAEP grade 8 mathematics assessment, Mega-States served nearly 40 percent public school students in the nation. Among those students who are eligible for the NSLP in the nation, 44 percent are in the Mega-States. Mega-States are also educating 33 percent of Black students and 69 percent of Hispanic students in the nation. The chart below shows that California and Texas are the two front contributors for these percentages.

Based on the 2010 Census data, eight of the ten most populated cities are in Mega-States. Seven of these top ten cities also participated in the NAEP Trial Urban District Assessments. The chart below shows what percentages of lower-income or minority students in the nation or in their home state are from these 7 districts.

## B. Exclusions and accommodations

6. What were the exclusion and accommodation rates for the Mega-States in the NAEP reading, mathematics, and science assessments?

The exclusion and accommodation rates for the Mega-States in the NAEP reading, mathematics, and science assessments are presented in Appendix A in this document. In
general, the percentages of students identified as SD and/or ELL have increased over time in the nation and in the Mega-States, and the percentages of SD and/or ELL students being assessed have also increased.
7. What accommodations were offered in the NAEP reading, mathematics, and science assessments?

The accommodations offered in the NAEP reading, mathematics, and science assessments are shown below:

- Bilingual booklet (mathematics and science)
- Bilingual dictionary (mathematics and science)
- Read-aloud in regular session (mathematics and science)
- Large-print booklet
- Extended time in regular session
- Small-group session
- One-on-one session
- Scribe or use of computer
- Breaks during testing
- Magnification device
- School staff administers
- Directions read aloud in Spanish
- Directions read aloud in English
- Braille version of the text
- Sign language (reading and science)
- Cue to stay on the task
- Special equipment (reading and science)

Most other accommodations that schools usually offer, with the exception of testing over more than one day and permitting use of calculators in non-calculator blocks in the mathematics assessment. Allowing extra time and giving the assessment in a small-group format were the two most commonly used accommodations.
8. Why is the exclusion rate higher in Texas in grade 4 reading than in the other MegaStates?
The Texas exclusion rate of $5 \%$ is due to a state level policy where 4th grade students are allowed to use a Spanish version bilingual booklet on their state assessment. Because this accommodation is not allowed on the NAEP Reading assessment there were more students excluded.

## C. Reporting and interpreting results

## 9. What results were included in the Mega-States report? Why weren't writing results included in the report?

The Mega-States report presents previously released NAEP results for public school students at grades 4 and 8 in reading, mathematics, and science for the nation, California, Florida, Illinois, New York, and Texas. Specifically, it includes the following:

- Student performance results in these subjects over time and in the most recent assessments,
- Comparisons to the nation and among the Mega-States,
- Highlights of score gains for student groups that performed higher than their peers in the nation, and
- Student performance at or above the Proficient level on NAEP.

The National Assessment Governing Board oversees the creation of the NAEP frameworks that describe the specific knowledge and skills that should be assessed in each subject. The frameworks also provide the theoretical basis for the assessments, direction for what types of items should be included, and instructions for how the items should be designed and scored. The frameworks for all main NAEP assessments are periodically updated or changed to reflect current curricula and standards. Whenever changes are made to a subject framework, every effort is made to maintain the trend lines that permit the reporting of changes in student achievement over time. If, however, the changes made to an assessment are such that the results are not comparable to earlier assessments, a new trend line is started. This was the case for the science assessment in 2009 and the writing assessment in 2011, so the science results in the report are only shown for 2009 at grade 4 and for 2009 and 2011 at grade 8. The writing results were not included in the report because the 2011 writing framework begins a new trend line, and the new computer-based writing assessment in 2011 was not administered at the state level. Previous writing assessment results can be found in the 2002 and 2007 NAEP writing report cards and the NAEP Data Explorer at http://nces.ed.gov/nationsreportcard/naepdata/.

The state assessment component of NAEP began in 1990 with grade 8 mathematics. In 1992, grade 4 mathematics and reading were added, with grade 8 reading following in 1998. As explained above, a new science trend line began in 2009 for both grades 4 and 8 . All of the five largest states have data available from these earliest assessments, with the exception of Illinois (as shown in the table below). In Illinois, the first grade 4 data were available for mathematics in 2000 and for reading in 2003. The first grade 8 data were available for reading in 2003.

Summary of the earliest NAEP assessment years for which
selected state data are available, by grade and subject

| Subject | Grade 4 | Grade 8 |
| :---: | :---: | :---: |
| Reading | 1992 - California, Florida, New York, and Texas 2003-Illinois | 1998 - California, Florida, New York, and Texas 2003-Illinois |
| Mathematics | 1992 - California, Florida, New York, and Texas 2000- Illinois | 1990 - California, <br> Florida, Illinois, New York, and Texas |
| Science | 2009 - California, Florida, Illinois, New York, and Texas | 2009 - California, <br> Florida, Illinois, New York, and Texas |

## 10. Can results be compared across subjects and grades?

Because NAEP scales are developed independently for each subject, scores cannot be compared across subjects. Reading and mathematics scores are reported on a 0-500 scale, while science scores are reported on a $0-300$ scale. For science, a separate $0-300$ scale was developed at each grade level, so scores cannot be compared across grades. For mathematics and reading, results for all grades assessed were analyzed together to create a 0-500 crossgrade scale in the base year of the trend line. In subsequent years, the data from each grade level were analyzed separately and then linked to the original cross-grade scale established in the base year. Comparisons of overall national performance across grade levels on a crossgrade scale are acceptable; however, other comparisons of scores across grades are not as strongly supported by the data, so they are therefore discouraged.

## 11. What information is on the website that is not shown in the report card?

In addition to the results presented in the print report, the Web version of the Mega-States report also included the following:

- Demographic information and performance results for various student groups (i.e., race/ethnicity, eligibility status for free/reduced-price school lunch, school location, students with disabilities, and English language learners),
- White-Black/White-Hispanic score gaps,
- Contextual variable results (e.g., teachers' educational background and classroom instructions), and
- The percentage of students identified as SD and/or ELL excluded and accommodated as a percentage of all students or as a percentage of identified SD/ELL students over time.
The summary of student performance at or above the Basic level on NAEP is presented in Appendix B in this document. More Mega-States data are available on the NAEP Data Explorer at http://nces.ed.gov/nationsreportcard/naepdata/.

## 12. What were the score changes for the other 45 states in the NAEP reading and mathematics assessments?

The charts below show the score changes for each state and show their changes compared to the nation.

| Reading grade 4 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Order | State | Score change compared to the nation (public) | 1992 | 2011 | Score change 2011-1992 |
| 1 | Maryland | $>$ | 211 | 231 | 20 |
| 2 | Florida | > | 208 | 225 | 16 |
| 3 | Alabama | > | 207 | 220 | 13 |
